Practical 09: Guass Seidel's Iteration Method

Objective: To find root of the system equation using Guass Seidel's Iteration method.

2. Algorithm:

1. Start
2. Input the matrix of equations in arr[n][n+1] where n is number of unknown variables
3. Check the validity of the equations, if valid we can apply iterative methods !!!
4. Matrix X[n] , for unknown variables.
5. Take x0=y0=z0=0
6. Convert the variables as a function of other variables.
7. Apply iteration method in loop with immediate updation:
        x=f(y0,z0)
        y=f(z0,x)
        z=f(x,y)
        x=x0
        y=y0
        z=z0

if((z-z0)>allowed Error AND (y-y0)>allowed Error AND (x-x0)>allowed Error)
        Terminate Loop

8. Solution:
        for(i= n-1; i>=0; i--){
      X[i]= (arr[i][n])/arr[i][i];
   }
9. Print X
10. Stop

Code:

```
#include <stdio.h>
#include <math.h>
#include <stdlib.h>

float arr[3][4],x[3];
int n=3;
/*
```

```
   CBNST Page No.454
   8x-3y+2z=20
   4x+11y-z=33
   6x+3y+12z=35
*/
#define x(y0, z0) (arr[0][3] - (arr[0][2]*z0 + arr[0][1]*y0)) / arr[0][0]
#define y(x0, z0) (arr[1][3] - (arr[1][2]*z0 + arr[1][0]*x0)) / arr[1][1]
#define z(y0, x0) (arr[2][3] - (arr[2][0]*x0 + arr[2][1]*y0)) / arr[2][2]

void checkValidity(){
   for (int i = 0; i < n; i++)
   {
      float sum=0;
      for(int j=0; j<n; j++){
         if(i!=j){
            sum+=fabs(arr[i][j]);
         }
      }
      if((fabs(arr[i][i])-sum)<0){
         printf("Can't apply iteration method !!!!\n\n");
         exit(1);
      }
   }
   printf("Can apply iteration method !!!!\n\n");
}

int main()
{

   printf("Enter coefficients of Augmented Matrix:\n");
   for (int i = 0; i < n; i++)
   {
      for (int j = 0; j < n + 1; j++)
      {
         printf("a[%d][%d] = ", i, j);
         scanf("%f", &arr[i][j]);
      }
   }
   checkValidity();

   int iter = 1;
   float allErr, fabx, faby, fabz, deltaX, deltaY, deltaZ;
   float x0 = 0.0, y0 = 0.0, z0 = 0.0;
   printf("Enter the allowed error: ");
```

```
    scanf(" %f", &allErr);

    printf("\n\nIteration\t\tx0\t\ty0\t\tz0\t\t\tx1\t\ty1\t\tz1\n\n");
    do
    {
        /* code */
        float xTemp=x0;
        float yTemp=y0;
        float zTemp=z0;
        fabx = fabs(x(y0, z0));
        deltaX = fabs(x0 - fabx);
        x0 = fabx; // Immediate Updation
        faby = fabs(y(x0, z0));
        deltaY = fabs(y0 - faby);
        y0 = faby; // Immediate Updation
        fabz = fabs(z(y0, x0));
        deltaZ = fabs(z0 - fabz);
        z0 = fabz; // Immediate Updation
        printf("%d\t\t\t%f\t%f\t%f\t\t%f\t%f\t%f\n", iter, xTemp, yTemp, zTemp, fabx, faby,
fabz);
        iter++;

        // } while (iter<15);
    } while ((deltaX > allErr) || (deltaY > allErr) || (deltaZ > allErr));

    printf("\n\nThe roots are: \n");
    printf("x= %f\n", fabx);
    printf("y= %f\n", faby);
    printf("z= %f\n", fabz);

    return 0;
}
```

Output:

```
PS D:\01_Java\Deepankar\CCpp\CBNST\Practical-09-GuassSeidel> cd
