Environmental Management And Ethics

DEEPANKAR SHARMA

STUDENT ID : 20041299

UNIVERSITY ROLL NO : 2092014

I would like to express my special thanks of gratitude to my teacher **Mayurika Ma'am** , who gave me **The Golden Ooportunity** to do this wonderful moocs seminar on the topic “**ENVIRNMENTAL MANAGEMENT AND ETHICS**”.

and also for providing with all the facilities that were required. The fact is I learnt a lot of new things during this course and I'll surely implement the knowledge in my real like too.

Acknowledgement

REGARDS,
DEEPANKAR SHARMA

ETHICAL DILEMMA

WELCOME AND INTRODUCTION

The environmental ethical dilemmas that we face are immense. In this module, we will introduce you to our course on Environmental Management & Ethics.

TECHNOLOGY

POLLUTION

SUSTAINABILITY

ENVIRONMENTAL ETHICS

In this module, we are introduced to environmental ethics in general and three different kinds of environmental ethics in specific.

Learning Objectives:

Describe

Define

Summarize

Give examples

LAND ETHICS
DEEP ECOLOGY
ECOFEMINISM

Environmental Management Of Wicked Problems

In the past, environmental problems were local and we could use our senses to detect them. We could see them, smell them and feel them and we could develop uniform solutions to them. They were tame problems. More and more of the environmental dilemmas and problems that we face are not tame. In this module, you will learn about environmental management of wicked problems in contrast to tame problems.

CONNECTED PROBLEMS

GREENHOUSE EFFECT

MELTING OF GLACIERS

GLOBAL WARMING

DEFORESTATION

ENVIRNMENTAL PROBLEMS

Learning Objectives

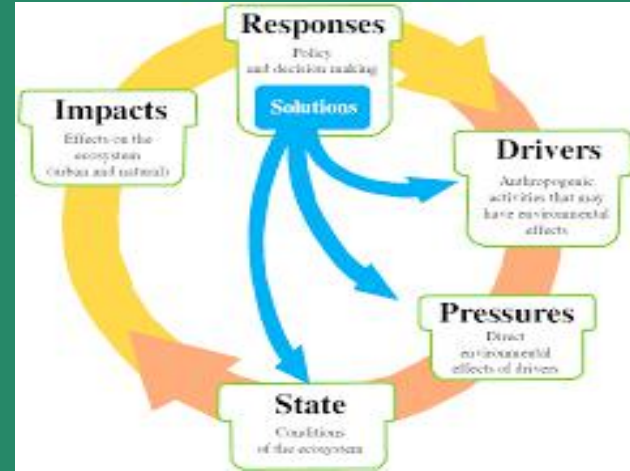

Decision-Support Tools

Tools and methods such as cost-benefit analysis, risk assessment, technology assessment often provide support to decision-maker when it making decisions about how to best management the environment and environmental resources. These decision-support tools have different ethical foundations and different set of values embedded in them, which are important to have in mind.

DPSIR

DPSIR (drivers, pressures, state, impact and response model of intervention) is a causal framework for describing the interactions between society and the environment: Human impact on the environment and vice versa because of the interdependence of the components.

COST BENEFIT ANALYSIS

A cost-benefit analysis (CBA) is the process used to measure the benefits of a decision or taking action minus the costs associated with taking that action.

STAKEHOLDER ANALYSIS

Stakeholder analysis is a process of systematically gathering and analyzing qualitative information to determine whose interests should be taken into account when developing and/or implementing a policy or program.

TECHNOLOGY ASSESSMENT

Technology assessment is a scientific, interactive, and communicative process that aims to contribute to the formation of public and political opinion on societal aspects of science and technology.

Environmental Regulation And Principles

In this module, we were introduced to the main different kinds of implementing environmental regulation as well as some of the key environmental principles on which environmental management is based internationally.

Recommendations On Your Chosen Environmental Ethical Dilemma

In this module, we learned-by-doing how hard it can be to develop a set of clear recommendation to solve a given environmental ethical dilemma.
